

nexpose[®]

Intel Security's Exclusive Partner for Vulnerability Management

Rapid7's vulnerability management solution, Nexpose, helps you reduce your risk of a breach by enabling you to assess and respond to changes in your environment in real time and prioritizing risk across vulnerabilities, configurations, and controls.

Use Nexpose to:

- Know your weak points
- Prioritize what matters most
- Improve your outcomes

Get enterprise-class protection with up-to-date scans for almost 68,000 vulnerabilities and over 163,000 checks across your network.

Overview

As an Intel Security customer, it's easy to transition from McAfee® Vulnerability Manager (MVM) to Rapid7's industry leading vulnerability management solution, Nexpose. Intel Security announced end-of-life for MVM and chose Rapid7 as the exclusive partner for vulnerability management moving forward.

Rapid7 has successfully migrated many enterprise organizations from MVM to Nexpose, which offers over forty fully supported integrations, including McAfee ePOTM, McAfee® Data Exchange Layer, and McAfee® Enterprise Security Manager (SIEM).* We look forward to including you in our family of large and small organizations that benefit from our products and award-winning customer support. Contact us today to learn more about getting started with Nexpose:

Know Your Weak Points

You can't reduce risk if you can't find, validate, and prioritize it. Nexpose dynamically discovers your complete attack surface to find vulnerabilities you are missing today. Understand your threat exposure by determining if your vulnerabilities can be exploited and if your compensating controls are deployed successfully. Contextualize the risks to get a true picture of them as they align to your modern digital business.

Respond to Change Real Time with Nexpose Adaptive Security

Adaptive Security enables you to automatically respond to changes in your attack surface and the threat landscape. In addition to providing a baseline for full asset visibility and assessment, you can dynamically identify and assess changes on your network as they happen. From new assets joining the network, to scanning for new vulnerabilities as soon as they become known, you are able to stay on top of your risk between scheduled scans.

Identify and Respond to Critical Vulnerabilities

Increase credibility with your IT team. Rapid7's vulnerability research team works closely with Rapid7 Labs and our open source community, Metasploit,

to ensure we have accurate and fast coverage for vulnerabilities. When critical threats emerge such as Heartbleed, Poodle, and Bash Bug vulnerabilities – Nexpose helps you prioritize and remediate with confidence.

Get Contextual Business Intelligence with RealContext™

Not every risk is the same; context is everything. You must understand what matters to your business. Only Rapid7 RealContext™ provides contextual business intelligence to allow you to focus on the highest risks that matter to your business, through automated asset classification and risk prioritization. With RealContext™ you can shorten the window of attack on your highest risks and improve your team's productivity.

"I love the automation options. It's like having a new dedicated analyst on the team. New asset handling is always a chore, but automation makes it easier to deal with consistently."

-Jordan Schroeder,
Security Architect, Visier Inc.

Prioritize What Matters Most

It's impossible to remediate every risk. With Nexpose, the highest risks are prioritized using threat intelligence aligned with what's important to your business. Focusing your remediation efforts on taking the most impactful actions will allow you to reduce the most risk with the least amount of effort and keep your IT team focused.

Focus on the Highest Risks Using RealRisk™

Nexpose uses an advanced vulnerability scoring algorithm, RealRisk™, that provides insights into the most critical vulnerabilities. It leverages threat intelligence such as exploit and malware kit exposure, CVSS v2, temporal risk, and asset importance metrics to give you a granular score for risk prioritization.

Deliver Impactful, Actionable Remediation Plans

Drive effective risk reduction and avoid distraction with a one-page, prioritized report that highlights the most impactful risks to the business. Save time by automatically assigning remediation plans using RealContext™. Targeted, concise, actionable, and clear step-by-step instructions enable IT teams to quickly remediate risk.

Implement Best Practice Security Controls

Do you know which security controls you should implement to reduce your risk of a breach? Nexpose identifies gaps in your defenses and provides a prioritized list of security controls to deploy on your endpoints and servers. This allows you to mitigate risks against today's threat landscape until vulnerabilities can be remediated.

Improve Your Outcomes

You need to prove that your decisions, in fact, are reducing risk. Nexpose allows you to easily see your risk level changing based upon your remediation efforts and show that improvement to your executives.

Drive Decisions Using Powerful Reporting

Do you know where you should invest energy and budget? Nexpose allows you to see how your risk is changing over time, to determine if you are doing better or worse. Risk Scorecards allow you to easily benchmark different departments against each other to understand who is doing well and who isn't. This enables you to determine which teams need help and which teams you can learn from.

Meet Vulnerability Management Compliance Requirements

Nexpose enables organizations to stay compliant with PCI DSS, NERC CIP, FISMA (USGCB/FDCC), HIPAA/HITECH, Top 20 CSC, DISA STIGS,

and CIS standards for risk, vulnerability, and configuration management. Unlike other solutions that may burden the network with multiple scans, Nexpose's fast, unified security and compliance assessment improves the performance of your security program by giving you a complete risk and compliance posture.

Key Benefits of Moving to Nexpose

- Scales for the largest enterprises
- Quick and painless transition with MVM migration toolkit
- Reduce risk fast with impactful remediation guidance
- Advanced risk scoring using threat intelligence
- Award-winning enterprise-level support
- 40+ fully supported integrations including McAfee ePO™, McAfee® Data Exchange Layer, and McAfee® Enterprise Security Manager (SIEM) *
