The top 4 things that scare IT professionals

Human Error

More security concerns are related to user error rather than brute-force attacks 15% vs. 9%.

"The move to a more centralized structure for all IT services, although positive with regards to efficiency and effectiveness, has created a larger gap between IT experts and academic programs."

~Mauricio C.

Networking is Complex

Fears specifically related to the complexities of networking concerns 7% of respondents.

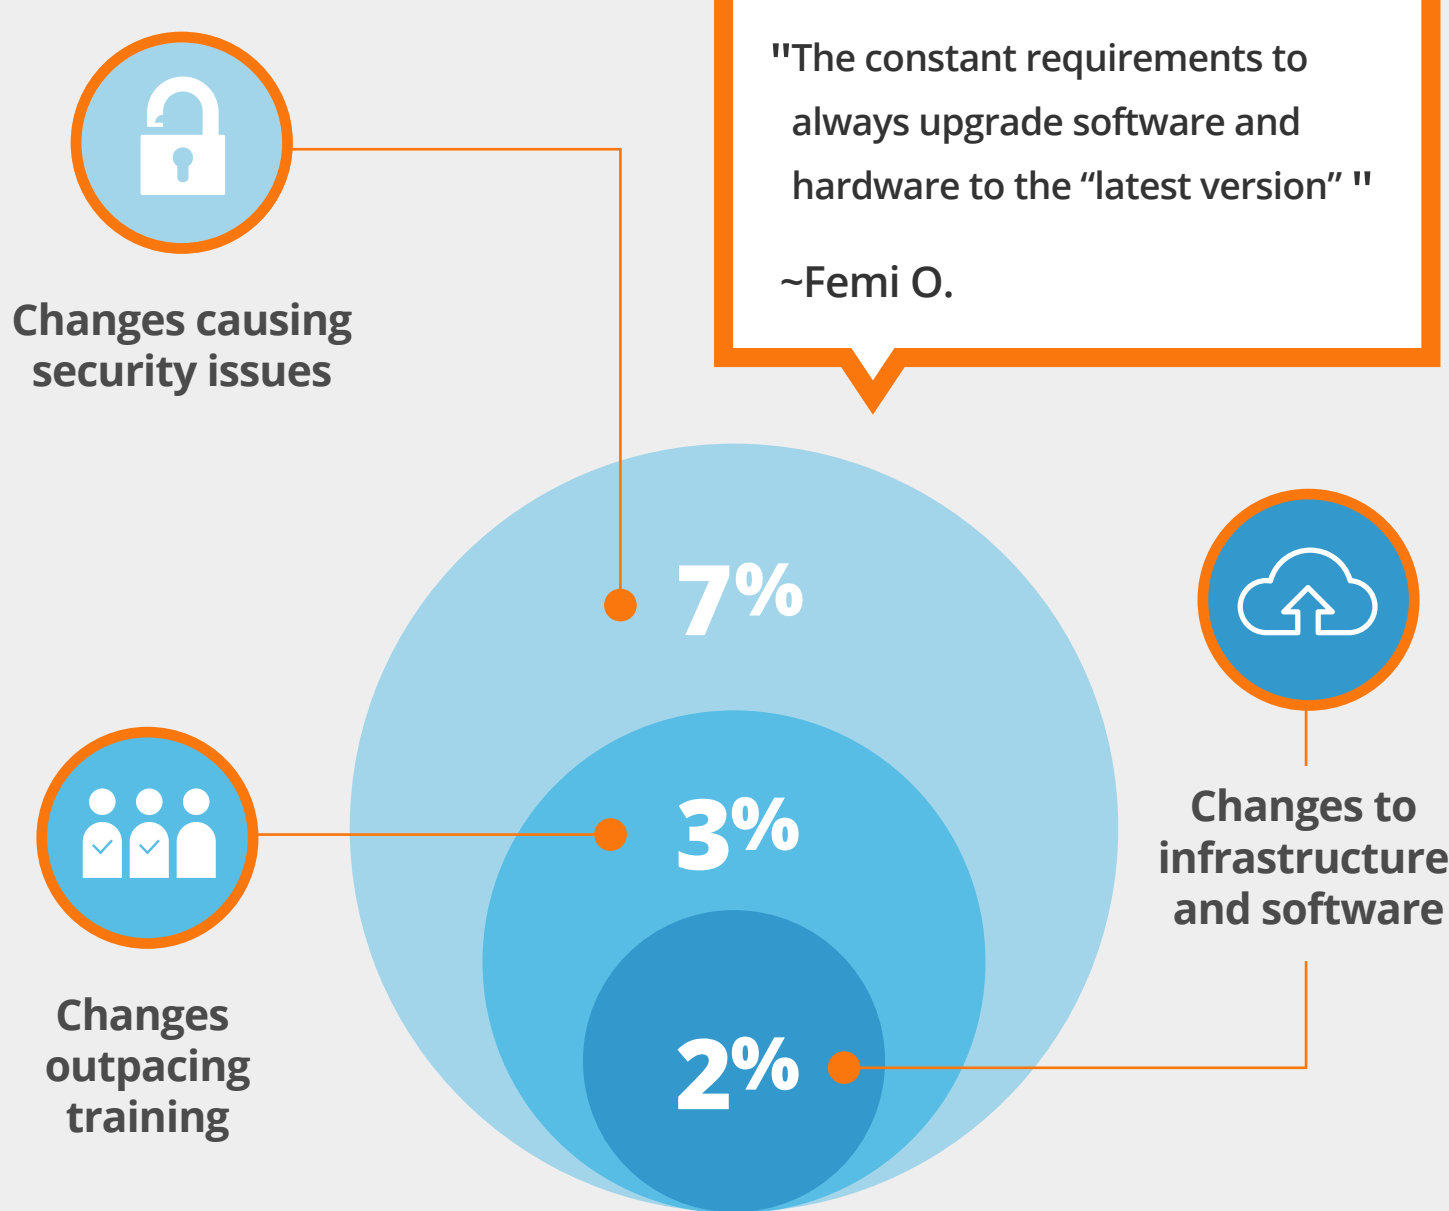

"The thing I'm most concerned about is the complexity of SDN (Software Defined Networking) in cloud environments. Networking itself is complex enough in the traditional world, but when it comes to the Software Defined abstraction of network functions this can be a real challenge..."

~Matthias B.

USER ERROR, 15% > BRUTE-FORCE ATTACKS, 9%

COMPLEX NETWORKING, 7%

Fear of Change

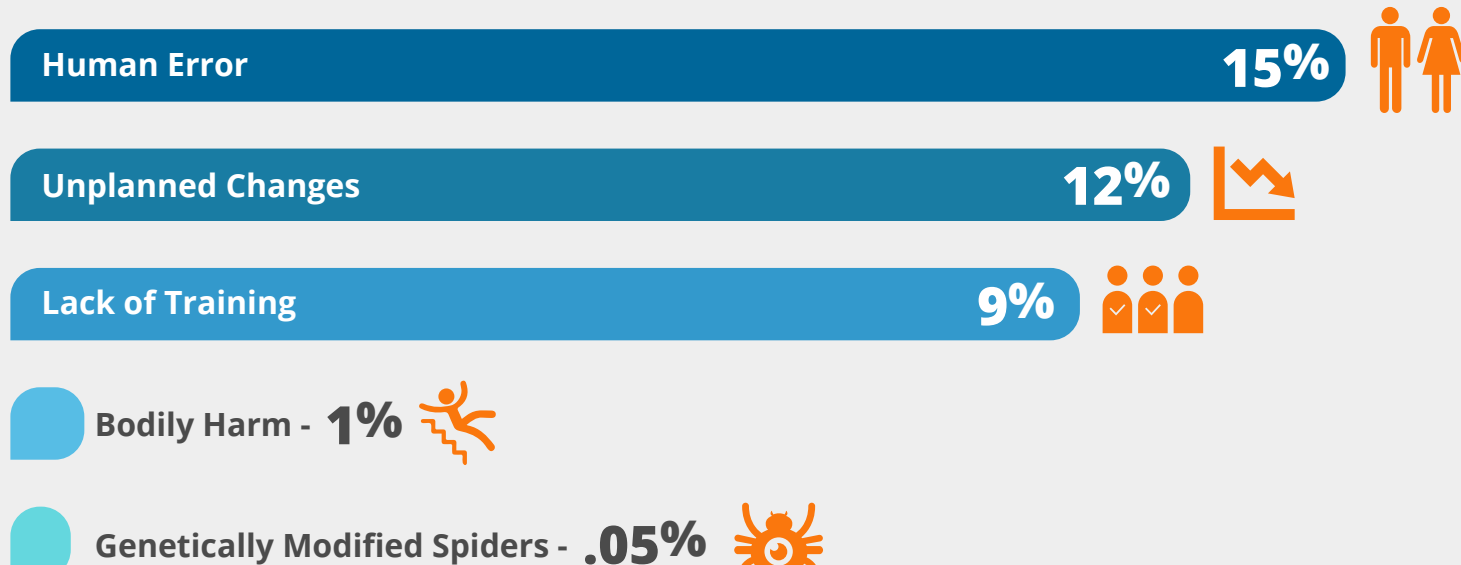

Fear of Cost

Cost is always a concern with IT Professionals. This concern was also seen across all categories.

Not all fears are rational...

Face your fears

Good log management can help you fight your fears. As infrastructure moves to the cloud and becomes more complex, having the ability to effectively monitor and troubleshoot these systems is imperative. Using a log management tool like Logentries can decrease your infrastructure, personnel, and support costs, making it easier to sleep at night.
