

## NEED ACCESS TO YOUR APP'S SOURCE CODE?

Use this handy email template to ask your application owner to add the InsightAppSec meta tag, so you can get scanning with your InsightAppSec free trial

Hello <Insert App Owner's Name Here>,

Web application attacks continue to be the #1 source of breaches according to the Verizon DBIR report from the past couple of years.

In an effort to improve our application security posture, I'm currently assessing Rapid7's Dynamic Application Security Testing (DAST) tool, InsightAppSec. InsightAppSec can automatically crawl and test web applications to check for vulnerabilities like SQL Injection, XSS, CSRF, and many more.

I can configure the scan to minimize impact to our application users by scheduling the scan to run during a maintenance window, or when fewer users are on the app. The time it takes the scan to run can vary, based on how the scan is configured and the size of the application. Please let me know when would be an appropriate window of time (estimated 2-3 hours) when the scan can take place.

I'd like to scan our application at: <Enter URL to application here>, and will need your assistance for this assessment.

The following HTML meta tag will need to be added below the <head> tag in the HTML code at the base path of the application so InsightAppSec can validate that we own the application:

<Enter meta tag from InsightAppSec here>

Please let me know if you have any questions, and I appreciate your help in our efforts to improve our organization's security!

Regards,  
<Your name here>
