

Managed Digital Risk Protection

Anticipate and prevent breaches by pinpointing the earliest signals of a targeted attack across the clear, deep, and dark web, alongside Rapid7's leading MDR

Managed Digital Risk Protection (DRP) from Rapid7 gives teams expert monitoring of the external attack surface – and confidence that the earliest signals of an attacker trying to choreograph a targeted breach will be stopped. With specialized threat analysts working as an extension of a customer's in-house team, there's total coverage across the clear, deep, and dark web. When a threat is detected, our experts are ready to take action. They eliminate it at the earliest stages of the kill chain, preventing a breach or broader impact.

Key Customer Benefits:

-  Identify the first signs of a cyber threat to prevent a breach
-  Unlock visibility and certainty around ransomware leakage
-  Rapidly remediate and takedown threats to minimize exposure
-  Leverage our security experts as an extension of your team to eliminate noise and accelerate results

Challenges of Detection & Response Across the External Attack Surface

- Difficult to navigate the entirety of the clear, deep, and dark web - particularly restricted forums and channels
- Lacking specialized skill sets to triage external threat alerts and access details to determine severity and priority
- Challenging to effectively act on insights and operationalize ecosystem to eliminate external threats quickly
- Disparate, point solutions amplify noise and false-positive alerts for already-constrained teams

Get Command of Your External Attack Surface to Prevent Breaches and Minimize Risk

Pinpoint threats at the beginning of the kill chain to prevent an attack

With Managed DRP, customers gain broad and deep external attack surface monitoring with experts who know how to navigate restricted channels and exclusive dark web forums.

Our experienced analysts operate as an extension of your team, reliably identifying real threat signals and enabling your team to anticipate and cut off attacks before they can have a broader impact for your organization. Example use cases include:

Credential and Data Leakage: Data loss indicators, login data exfiltrated, exposed credentials, and other detections of confidential data leaked on the web.

Phishing Protection: One of the most popular and reliable attacker techniques; looking for phishing domains, lookalike sites, email domains, and other imitators.

Dark Web Monitoring: Monitoring exclusive dark web forums and private hacker channels for targeted attack indicators or company information for sale.

Unlock visibility and certainty around ransomware leakage

With ransomware leakage visibility in Managed DRP, customers have continuous monitoring of attack groups and their boards to look for customers' exposed information. Once identified, our experts help analyze this information and ensure the customer has visibility into exactly what has been leaked. With this information, you can know for certain what exposures exist and take appropriate action to address any compromise.

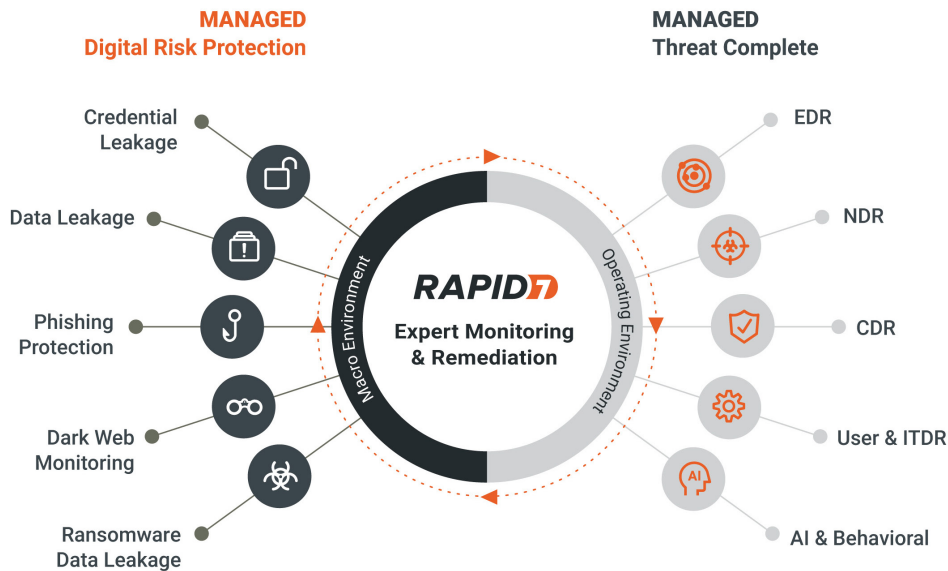

Rapidly remediate and takedown threats to minimize exposure

Our experts are experienced in navigating the dark web and have relationships with an ecosystem of domain registrars, web hosting providers, and more to accelerate takedown and remediations on your behalf. We streamline these workflows to eliminate targeted, malicious campaigns and minimize potential exposure to your business. With expert guidance and execution, we are able to mitigate the risk posed by external threats and keep your organization safer.

Leverage experts to eliminate noise and accelerate results

With Managed DRP complimenting and extending our leading MDR services, Managed Threat Complete customers are able to quickly unlock an actionable, 360° view to pinpoint threats across their attack surface. Our DRP and MDR experts work side-by-side. They share knowledge of your macro environment and hunt down active threats wherever they may be. When we do identify an event – whether attack signals outside your perimeter or within your operating environment – our team is by your side to eliminate that threat from end-to-end.

360° Expert Detection and Response

About Rapid7

Rapid7 is creating a more secure digital future for all by helping organizations strengthen their security programs in the face of accelerating digital transformation. Our portfolio of best-in-class solutions empowers security professionals to manage risk and eliminate threats across the entire threat landscape from apps to the cloud to traditional infrastructure to the dark web. We foster open source communities and cutting-edge research—using these insights to optimize our products and arm the global security community with the latest in attacker methodology. Trusted by more than 11,000 customers worldwide, our industry-leading solutions and services help businesses stay ahead of attackers, ahead of the competition, and future-ready for what's next.
