

UNLOCK COMPLETE VISIBILITY & CONTROL OVER YOUR ATTACK SURFACE

WITH ASSET DISCOVERY POWERED BY SURFACE COMMAND

Identify unknown assets and secure your entire digital estate

Security teams rely on Rapid7 Managed Detection and Response (MDR) for best-in-class protection of every vector, but unknown and unmanaged assets create dangerous blind spots. While misconfigurations, weak passwords, and outdated software present vectors that are ripe for attack, **the greatest risk comes from assets that are completely outside of visibility – unmonitored, unpatched, and unprotected.** These blind spots not only expand the attack surface and make it harder to assess risk, but also slow incident response times and make it difficult to respond to threats in a timely manner.

76%

OF ORGANIZATIONS HAVE EXPERIENCED SOME TYPE OF CYBER-ATTACK DUE TO AN UNKNOWN, UNMANAGED, OR POORLY MANAGED INTERNET-FACING ASSET

Enterprise Strategy Group

BENEFITS AT A GLANCE

- Get a 360° view of your digital estate, and part with the concept of an unknown asset
- Identify security gaps and bring them into the SOC line of sight
- Reduce time spent manually tracking down assets and focus on more strategic initiatives

Unmatched visibility: MDR that leverages ALL security data

With Asset Discovery, you can integrate and correlate all security data – cloud, network, endpoints, identities, and external attack surface – to create a complete, continuous view of your environment. Powered by Surface Command – Rapid7’s Attack Surface Management solution – Asset Discovery delivers continuous visibility and automated inventory enrichment, ensuring no asset is overlooked. By bringing every asset into MDR scope, our SOC can detect, investigate, and respond to threats faster and more effectively than ever before.

NEW:

Visibility into your full asset inventory is now directly reflected in the **Detection & Response Dashboard**. Track asset visibility alongside other key KPIs and value-based metrics to measure and quantify MDR service

Close the gaps in your MDR program with market-leading CAASM technology

Eliminate blind spots

Unmonitored assets – often unpatched, misconfigured, or exposed to the internet without appropriate controls – present significant security risks. Continuously ingest data from cloud environments, on-prem infrastructure, and remote endpoints, correlating asset metadata to pinpoint shadow IT, orphaned devices, and unauthorized applications – bringing every asset into MDR scope and eliminating exploitable gaps.

Accelerate incident response

Incomplete attack surface visibility opens the door for attackers to exploit gaps and move throughout your environment undetected, potentially resulting in ransomware attacks or denial of service. Armed with full context of the attack surface, the SOC can triage alerts faster, more accurately prioritize threats, and more quickly contain incidents that could lead to a breach.

Gartner

Save time on manual tasks

Traditional asset discovery is often a manual, error-prone process – requiring cross-referencing of disparate data sources, spreadsheet maintenance, and manual validation. Automate asset classification and inventory enrichment to eliminate inefficiencies and divert time spent on tedious data reconciliation to higher priority initiatives.

Maintain regulatory compliance

Regulatory frameworks like NIST CSF, CIS, ISO 27001, and SOC 2 require clear asset inventory to enforce security controls and manage risk effectively. Account for all assets across cloud, network, and endpoint environments, ensuring no critical systems are left unmonitored or unprotected. Validate coverage and policy adherence to reliably meet regulatory requirements.

About Rapid7

Rapid7 is creating a more secure digital future for all by helping organizations strengthen their security programs in the face of accelerating digital transformation. Our portfolio of best-in-class solutions empowers security professionals to manage risk and eliminate threats across the entire threat landscape from apps to the cloud to traditional infrastructure to the dark web. We foster open-source communities and cutting-edge research—using these insights to optimize our products and arm the global security community with the latest in attacker methodology. Trusted by more than 11,000 customers worldwide, our industry-leading solutions and services help businesses stay ahead of attackers, ahead of the competition, and future-ready for what's next.
