

Rapid7 Advisory Services

Gain Security Resiliency

**Overwhelmed. Understaffed.
Unprotected. Sound familiar?
Many companies lack the time
and resources to accurately
assess their security program
and uncover the insight needed to
move it forward.**

**Rapid7 designed our Advisory
Services with these challenges
in mind, built to help prioritize
security initiatives, align them to
the business, and get it all done
yesterday.**

Our team of experts have decades of security, risk, and IT experience across different industries and company sizes. They have an innate drive to make your security programs relevant, actionable, and sustainable. Powered by our people and our leading technology, we provide assessment and development services that give you the steps—and confidence—you need to take your security program to the next level.

Our team can quickly assess what's working, what isn't, and what can be improved based on the risk control ineffectiveness creates for your business. We help you optimize, getting the most out of your existing security investments and maximizing the impact of your people, processes, and technology.

In the end, you'll have prioritized, actionable, and data-driven insights, with a step-by-step guide to strengthen your security posture. In other words, you'll gain security resilience.

The Rapid7 Difference

What makes our approach unique? Well, you do. We skip the one-size-fits-all solutions and apply our extensive expertise in cybersecurity and program development to create a customized program that's right for you and your business, which helps your organization to:

Leverage Expert Teams

You'll benefit from our strategic security experts, who have deep experience building and managing security programs, and expertise in vulnerability management, cloud security, SOC operations, incident response, identity programs, and executive leadership.

Drive Executive Support

These same experts also make it easy to work with security leaders to choose the right tools and technology and build the collateral to evangelize effective security controls to their broader organization.

Create Measurable Improvement

Our services drive measurable improvements and address both strategic and tactical aspects of the security program. We create detailed documentation to help support your goals, focused on people and process, prioritized based on risk, and executive and board support.

Our Advisory Services

Cyber Security Maturity Assessment (CSMA)

Where does your security strategy stand? What are your biggest risks? Where should you focus your efforts? Rapid7's Cybersecurity Maturity Assessment utilizes cybersecurity best practices and recognized cyber frameworks to answer these questions surrounding your existing security program. While the Cybersecurity Maturity Assessment is particularly valuable to medium and large businesses, the assessment can benefit organizations of any size.

The goal of the Cybersecurity Maturity Assessment is to provide a view of your current security posture, an objective review of existing plans, and a guide to strategic planning. The Cybersecurity Maturity Assessment will also help your organization develop tactical and strategic directions to further mature and strengthen your security program efforts. Not to be forgotten, aligning your security program with the best practices outlined in the assessment better positions your program to meet (and exceed) industry compliance standards.

Security Program Development

For organizations lacking the right people, processes, and technology to develop and advance their security programs, don't worry—we've got you covered. Rapid7 offers an assortment of full-service programs tailored to your unique business needs, size, and risk, and designed to make your security program relevant, actionable, and sustainable.

Whatever your organization's security needs—from creating vulnerability management programs to developing security policy, and everything in-between—we'll help you create processes and collateral to run any facet of your security program.

Our recommendations provide the foundation for a sustainable investment in people, processes, and technology, as well as measurable cybersecurity improvements in a timeframe appropriate to your organization.

Security Policy Development

Development and maintenance of Information security policies is integral part of any Information Security Program. Security policies set the standard for the implementation of all controls associated with managing the risk associated with an organization's Information Security Plan. Rapid7's policy development services can help clients rapidly create and deploy comprehensive security policies, standards, and guidelines. We offer a suite of information security policies that better align with business objectives and best practices, while addressing the risk and compliance requirements of your organization's chosen security framework.

Merger & Acquisition Security Assessment

Rapid7's Merger & Acquisition (M&A) Security Assessment engagements are tailored to provide organizations with a cost-efficient, high-value security review during the merger or acquisition process. Capture an asset's cybersecurity capability state pre-merger to aid in the final transaction. Often, this assessment will identify large gaps that, when left unmanaged, put the entire asset at risk.

The base engagement will analyze the risk profile and security posture of an asset across six security domains. That base assessment can also be combined with a validated vulnerability assessment, social engineering, penetration testing, and an in-depth compromise assessment.

After the analysis, our team will deliver a report outlining major gaps and consultant observations to help you move forward with your decision. Post-merger, the M&A assessment can be enhanced to provide a go-forward strategic plan, program maturity rating, and/or best practice gap assessment.
