

Rapid7 Insight Agent

The universal Insight Agent is lightweight software you can install on any asset—in the cloud or on-premises—to collect data from across your IT environment. With unified data collection, Security, IT, and DevOps teams can collaborate effectively to monitor and analyze shared data.

Rapid7 Insight Platform

InsightVM

Vulnerability Management

- Live view into your exposures
- Asset security for remote workers
- Visibility into ephemeral assets

InsightIDR

UBA-Powered SIEM

- System-level visibility
- Real-time, deceptive detections
- Endpoint investigation and hunting

InsightOps

Log Management

- Real-time log centralization
- Alerts for critical events
- Live asset analysis

WHY USE THE INSIGHT AGENT?

1

Simple Installation

Install once using universal installers (MSI file for Windows, ZIP for Linux and Mac).

2

Real-time Monitoring

View endpoint data, including: Detailed asset information, Windows registry information, file version and package information, running processes, authentication information, local security and event logs, and more.

3

One Agent to Rule Them All

Leverage a single endpoint agent for vulnerability management, endpoint threat detection, and log management.

Small Footprint, Big Insights

Average daily network data transfer per workstation (10MB) or per server (100 MB) for InsightOps and InsightIDR.

RAM is limited to 200 MB per product.

The Insight Agent's footprint is kept under 50-100 MB on disk.

Average daily network data transfer of 3-5 MB for InsightVM.
