

Total Risk Coverage Program

Protect your web applications throughout the SDLC

Web applications continue to be the leading attack vector for today's adversaries. With the number of attacks on web apps having doubled since 2019¹, it's more critical than ever for security teams and their development counterparts to strengthen and protect applications throughout the software development lifecycle (SDLC).

Our Total Risk Coverage Program takes a holistic approach to securing your web apps, from the identification and remediation of vulnerabilities with our leading DAST solution, InsightAppSec, to the detection and prevention of real-time attacks with tCell by Rapid7. It focuses on your most critical applications, enabling unlimited scanning and monitoring, while also reducing risk for non-critical applications with minimal operational overhead.

This empowers you with the strategy and technology to **Test**, **Monitor**, and **Prevent** exploitation of your apps from design through production, and integrate seamlessly into the workflows and tools already leveraged by your developers.

Test	Monitor	Prevent
Find and prioritize vulns in your web applications or APIs	Monitor for and detect real attacks with next-gen WAF and RASP technology	Shorten remediation time with Attack Replay
Automate security testing by integrating into the SDLC	Identify and block suspicious actors and behaviors	Automate vulnerability remediation workflows
Visualize application risk in real time with dashboards	Perform runtime software composition analysis (SCA)	Protect unpatched web apps from nefarious attacks

¹ 2020 Verizon Data Breach Investigations Report

What's included in the program?

The Total Risk Coverage Program is priced per application*, and includes the following:

- **Unlimited testing and monitoring** of your most critical applications using InsightAppSec and tCell
- **Four additional scans** per year for your non-critical applications
- **Deployment services** to get you set up and running quickly
- **Health checks** to help you understand your application risk posture

*An application is a single domain name designed for end users with a specific purpose.

About InsightAppSec

Rapid7 InsightAppSec is our industry-leading DAST solution that helps you see more and remediate faster. InsightAppSec comprehensively checks for vulnerabilities in your modern apps and APIs with a rich library of attack modules that goes beyond just the OWASP Top Ten.

About tCell

tCell by Rapid7 is our next-gen cloud WAF and RASP solution. tCell provides visibility into your applications' attack surfaces, monitors for suspicious users and behaviors, and enables web applications to self-protect from attacks in real time.

About Rapid7

Rapid7 is advancing security with visibility, analytics, and automation delivered through our Insight cloud. Our solutions simplify the complex, allowing security teams to work more effectively with IT and development to reduce vulnerabilities, monitor for malicious behavior, investigate and shut down attacks, and automate routine tasks. Customers around the globe rely on Rapid7 technology, services, and research to improve security outcomes and securely advance their organizations.
