Secure Modern Apps

Collaborate With Speed

Scale With Ease

Key Differentiators

Helping our customers understand full stack risk to make teams successful in appsec

Best-of-Breed DAST

- Holistic approach to application security
- In-depth custom assessments
- Universal Translator technology
- Support for traditional and modern web app frameworks
- API testing/Swagger
- Multiple authentication types (OAuth)

Flexible Deployment

- Cloud console
- Cloud and on-premises engines
- Auto-updates for On-prem engines
- Hybrid approach
- Multi-language support for agent deployment
- Proxy deployment available for agent deployment

Remediation & Prioritization

- Attack Replay
- Prioritization recommendations
- Prescriptive recommendations for vulnerabilities

DevSecOps Partnership

- CI/CD tools like Jenkins and Bamboo
- Ticketing tools like Atlassian Jira and ServiceNow
- Detailed stack traces
- Snyk partnership to extend third party application risk identification

“Attack Replay saves me a lot of time. Developers don’t ask me nearly as often to run additional scans to test a new security bug patch—instead they can test it directly from the vulnerability report.”

— Senior IT Security Manager,
Leading Hardware Manufacturer
