12. Upgrade Microsoft Defender to the latest version.

Remediation Steps

Verify that the latest version of the Microsoft Malware Protection Engine and definition updates are being actively downloaded and installed for their Microsoft antimalware products. For more information on how to verify the version number for the Microsoft Malware Protection Engine that your software is currently using, see the section Verifying Update Installation in Microsoft Knowledge Base Article 2510781 <https://support.microsoft.com/kb/2510781>

23. Configure SMB signing for Windows

Remediation Steps

Configure the system to enable or require SMB signing as appropriate. The method and effect of doing this is system specific so please see [this Microsoft article](#) for details. Note: ensure that SMB signing configuration is done for incoming connections (Server).

24. Verify that the latest version of the Microsoft Malware Protection Engine and definition updates are being actively downloaded and installed

Remediation Steps

Verify that the update is installed. Customers should verify that the latest version of the Microsoft Malware Protection Engine and definition updates are being actively downloaded and installed for their Microsoft antimalware products. For more information on how to verify the version number for the Microsoft Malware Protection Engine that your software is currently using, see the section "Verifying Update Installation" in [Microsoft Knowledge Base Article 2510781](#). For affected software, verify that the Microsoft Malware Protection Engine version is 1.1.16400.2 or later. If necessary, install the update. Administrators of enterprise antimalware deployments should ensure that their update management software is configured to automatically approve and distribute engine updates and new malware definitions. Enterprise administrators should also verify that the latest version of the Microsoft Malware Protection Engine and definition updates are being actively downloaded, approved and deployed in their environment. For end-users, the affected software provides built-in mechanisms for the automatic detection and deployment of this update. For these customers, the update will be applied within 48 hours of its availability. The exact time frame depends on the software used, Internet connection, and infrastructure configuration. End users that do not wish to wait can manually update their antimalware software. For more information on how to manually update the Microsoft Malware Protection Engine and malware definitions, refer to [Microsoft Knowledge Base Article 2510781](#).
