

Sample Report - Risk Scorecard

Group: Linux Assets

Your group's grade of A is based on its average asset risk score of 279,361, which is more than 15% below the average of 415,423 across all groups. Grades range from A (average risk per asset is more than 15% lower than the average across all groups) to F (average risk per asset is more than 15% higher than the average across all groups). Use the following scan data to determine the factors that affect risk the most.

Statistics

- Assets: 1,229
- Vulnerabilities: 778,240
- Average vulnerabilities per asset: 633.2
- Average asset risk score: 279,361

Vulnerabilities

- Vulnerabilities with known exploits: 7.4%
- Exploits available for vulnerabilities: 2473
- Vulnerabilities with known malware kits: 0.3%
- Malware kits available for vulnerabilities: 147

Vulnerabilities

- Total
- Exposed to Malware Kits
- Exploitable

Group: Windows Assets

Your group's grade of F is based on its average asset risk score of 551,485, which is 15% greater than the average of 415,423 across all groups. Grades range from A (average risk per asset is more than 15% lower than the average across all groups) to F (average risk per asset is more than 15% higher than the average across all groups). Use the following scan data to determine the factors that affect risk the most.

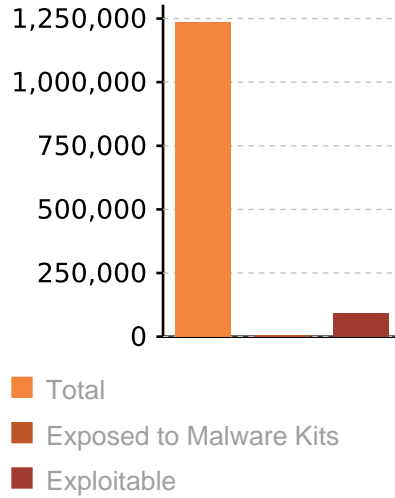

Statistics

- Assets: 1,007
- Vulnerabilities: 1,237,438
- Average vulnerabilities per asset: 1,228.8
- Average asset risk score: 551,485

Vulnerabilities

- Vulnerabilities with known exploits: 7.4%
- Exploits available for vulnerabilities: 1771
- Vulnerabilities with known malware kits: 0.5%
- Malware kits available for vulnerabilities: 150
